A collection of seven dental instruments, likely explorers or probes, arranged vertically. Each instrument has a long, slender shaft with a textured, knurled grip section in the middle. The tips vary in shape: the first is curved, the second is straight, the third is slightly curved, the fourth is a small circular tip, the fifth is a sharp point, the sixth is a flat blade, and the seventh is a wider, flat blade.

SCALER TRAY
DE-1850
100 x 200 mm

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1998. The public sector has also become an important employer of people with disabilities, with 1.5 million people with disabilities employed in the public sector in 1998, compared with 1.2 million in 1980.

There are a number of reasons why the public sector has become an important employer of people with disabilities. One reason is that the public sector has a long history of employing people with disabilities. In the 19th century, the public sector employed people with disabilities in a number of different roles, including as clerks, typists, and stenographers.

Another reason why the public sector has become an important employer of people with disabilities is that the public sector has a number of different departments and agencies, each of which has its own specific needs. This means that the public sector can employ people with disabilities in a wide range of roles, from clerical to professional.

One of the main reasons why the public sector has become an important employer of people with disabilities is that the public sector has a number of different departments and agencies, each of which has its own specific needs. This means that the public sector can employ people with disabilities in a wide range of roles, from clerical to professional.
